# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (I).

### MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

### EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (X) is placed after the name of the station.

## COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATESAll Causes: Disease and Injury:

Morbidity from all causes during the week ended 21 September decreased slightly, being reported at 473 per thousand strength per year. The current week's admission rate is 20 percent lower than that for the corresponding week of 1944. Morbidity from disease was reported at 438 per thousand.

The admission rate from injury remained at 35 per thousand. It should be borne in mind that the injury rates reported since October 1944 are not strictly comparable with those prior to that time because of the directive (issued 29 September 1944) which provided for the reporting of injuries existing prior to entry into active service and of readmissions for injury under "disease" rather than under "injury", as was formerly done.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 72 per thousand, an increase of 9 percent over the preceding week. The current week's rate is about 18 percent lower than that for the corresponding week of 1944.

The admission rate for pneumonia remained at 8 per thousand; the rate reported for the corresponding week of 1944 was 7 per thousand per annum.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding cases contracted prior to entry on active service, decreased slightly to 56 per thousand.

The admission rate from diarrhea and dysentery remained at 7 per thousand, having been 8 per thousand in the corresponding week of 1944.

The number of new cases of infectious hepatitis increased to 258 from 247 cases reported during the previous week.

VARIATION IN MORBIDITY BY SERVICE COMMANDAll Causes: Disease and Injury:

The admission rate from disease decreased in all Service Commands except the Fourth and the Military District of Washington, where increases of 3 percent and 7 percent respectively were registered.

The Second Service Command and the MDW reported the highest morbidity from all causes (534 and 598 per thousand respectively) and from disease (505 and 575 per thousand respectively). The lowest admission rates from all causes (405 per thousand) and from disease (386 per thousand) were reported by the First Service Command.

## COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth and Ninth Service Commands reported the highest morbidity from injury (40 and 41 per thousand respectively). All other Commands reported rates of less than 40 per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. increased in all Service Commands except the First. The MDW reported the highest morbidity from these causes (111 per thousand), while the lowest was registered by the First Service Command (43 per thousand). All Service Commands except the MDW had rates under 90 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases, increased in the Fourth Fifth, Sixth and Seventh Service Commands and the Military District of Washington.

Morbidity from diarrhea and dysentery was relatively high in the Second, Third, and Fifth Service Commands which had rates of 11, 15, and 14 per thousand respectively.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 24.7 per thousand strength for the week ended 21 September as compared with 32.2 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 76.4 per thousand troops in this country.

PATIENTS REMAINING UNDER TREATMENT: 21 September 1945:

The number of neuropsychiatric cases remaining was 29,471 or about 1600 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 44,000. The number of battle casualty patients remaining decreased by about 4500 to number 87,970.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

In the week ended 21 September there were 10,474 enlisted personnel discharged by CDD, or about the same number as in the previous week. Forty-four percent of these discharges were reported by General Hospitals and 38 percent by Convalescent Hospitals. Included among the 10,474 CDD's were 2438 neuropsychiatric cases.
